Centrus Energy
Bethesda, Maryland

Interior Design services for energy
company headquarters

As a leading partner in providing nuclear power around the world Centrus Energy wanted their new headquarters to reflect the great trustworthiness and professionalism the company has established over the past 25 years. The relocation of their Bethesda office offered an opportunity to embrace modern work-place strategies and a transition from an isolated environment with no open areas, lunch room, or informal meeting spaces. Centrus' new space features a contemporary design and collaborative areas representative of the firm's evolving culture and work in the dynamic energy sector.

Visitors entering Centrus' new 20,000 SF space are welcomed by brand-inspired artwork set within a lit alcove feature wall. The materials and color pallet establish a friendly and modern environment accented by natural finishes. New conference rooms incorporate the latest technologies and interconnected systems, allowing for user-friendly meeting spaces for client and internal gatherings. Given the sensitive nature of their work in the nuclear industry, the office includes SCIF spaces providing a secure working environment. A new very popular lunch room with exterior views doubles as a large informal gathering space that is often utilized for impromptu meetings. The majority of the offices and conference rooms are enclosed by glass walls, providing light and outdoor views throughout the office. The open plan and transparent materials allow for sightlines from end-to-end of the office. Two new coffee bars were added to further activate the office and stimulate interaction between staff.
