Coppermine Commons Renovation Herndon, Virginia

The Coppermine Commons renovation was designed with the idea of changing how a suburban office campus functions in light of changing workplace trends. Interior renovations focused on updates to existing lobbies, vestibules, restrooms, elevator lobbies/cabs and new tenant suites/entries. Ground floor tenant space was converted into building amenity areas including a 300 person indoor/outdoor cafe with a coffee/juice bar. This activates the property and provides a needed area amenity. A large flexible conference center responds to tenants desire to downsize in-house meeting space. The fitness center, yoga studio, bike storage, and changing rooms promote tenant health and bicycle commuting. Additional enhancements include new landscape and hardscape design.
